

Don't stifle investment in the most innovative form of radio since its inception. Don't take away the paying public's ability to get a better product from XM Radio. Over the airwave radio is unlistenable these days. ClearChannel and others have made the product terrible. They have taken away the ability of new creative artists to get to the public. They airwaves are full of radio personalities that are so rude that you can't listen to them in the car with your children. XM Radio creates an alternative that is working. That's why millions are voting with their pocketbooks and paying for service. Please reject the NAB's petition 04-160 and allow XM to provide traffic and weather. Please do not give in to the NAB's lobbying effort to in anyway limit XM's ability to improve their product. The public is paying for the service. We should have access to choose for a continually improving product. It does in any way harm an existing free service that is paid for by advertisers.
